Melissa, thx

Nothing else has changed. Only thing that has happened is approx 3000 gallons (waste wter) has been shipped for treatment and disposal yesterday. I will try to acquire a schedule for disposal from the facility. They are tied up in court this week.

The 40,000 gallons of product is not MCHM/PPH it is the additional products that the Facility stored because they have a WVDEP Order to remove all products from the site by March 15, 2014. Freedom Industries also has an order from WVDEP that they must start removal and demolition of the tanks and pipes on the property by March 15, 2014. EPA OSC, START and ERT will possibly be doing air sampling during the cutting and removal of tanks at the site. The MCHM/PPH is being stored in Baker Tanks at Poca Blending Facility in Nitro, WV which is also owned by Freedom Industries. There is about 78,000 gallons of MCHM/PPH that is being stored in the Baker Tanks that will be shipped out as orders come in for purchasing the product. At the Poca Blending Facility there is also waste water stored in baker tanks that has been approved for disposal at Waste Management DSI in Hurricane, WV. On-site at Freedom Industries there is 3 tanks that are currently storing waste water. The facility and Charleston Sanitation Board are in discussions about trucking that waste water still on-site to the waste water treatment plant for disposal. There really isn't a unified command, EPA is just

assisting/supporting WVDEP with oversight, documentation and other tasks as they arise.

That was the latest update I know, maybe Dennis has additional information.

Thanks,

Melissa

Subject: Freedom Industries

Dennis and Melissa,

Tomorrow, Chris, Dom and I will be on a conference call for the Emergency Response Technical Group (ERTG). At some point, we give updates of hot topics in our regions. I'd like to be ready to do one for the Freedom Industries Site. From yesterday's Hotsite message I got that the facility reports that approximately 40,000 gallons of product remain on-site and that they expect this product to be off-site this week. What's left to be done after that and what are you doing, coordinating with the UC?

Thanks,

Glen
